

Mixed Orientation Document

This page is **PORTRAIT** orientation

This document demonstrates mixed page orientations within a single PDF file. Page 1 and Page 3 use portrait A4 (210 × 297 mm), while Page 2 uses landscape A4 (297 × 210 mm). PdfEdit's render engine must correctly handle all three pages.

Portrait pages contain standard vertical layouts: title, body text, tables and figures arranged top-to-bottom. Landscape pages typically contain wider data tables, charts or diagrams that benefit from the extra horizontal space.

The PDF specification allows each page to have an independent MediaBox, so each page in a PDF can have a different size and/or orientation. The `/Rotate` entry in the page dictionary can also be used to rotate the display 0°, 90°, 180° or 270°.

Field	Value	Notes
Page Size	A4 (210 × 297 mm)	Standard portrait

Back to PORTRAIT — renderer should switch back correctly

Key render-engine checks for mixed-orientation PDFs:

- 1. MediaBox width & height correctly read per page (not cached from page 1).
- 2. Coordinate system origin correctly placed at bottom-left for each page.
- 3. Text baseline, image positioning and clipping bounds scale to per-page dimensions.
- 4. Thumbnails generated at correct aspect ratio for each page.
- 5. Rotation: /Rotate 0 on pages 1 & 3, implicit landscape via wide MediaBox on page 2.
- 6. Scroll/pan reset correctly when navigating between portrait and landscape pages.
- 7. Print dialog shows correct paper size per page.
